

Marketing Funnel & Conversion Performance Analysis

Submitted by: Sanjana Gunda

Organization: Future Interns

Domain: Data Science & Analytics

Tool Used: Microsoft Power BI

Dataset: Bank Marketing Dataset (UCI Repository)

1. Objective

The objective of this project is to analyze the marketing funnel and conversion performance using the Bank Marketing Dataset. The dashboard helps identify customer conversion trends, evaluate campaign performance, and understand which customer segments contribute most to successful conversions.

2. Dataset Description

The dataset contains marketing campaign information, including customer demographics, contact methods, campaign details, and subscription outcomes.

Key Columns Used:

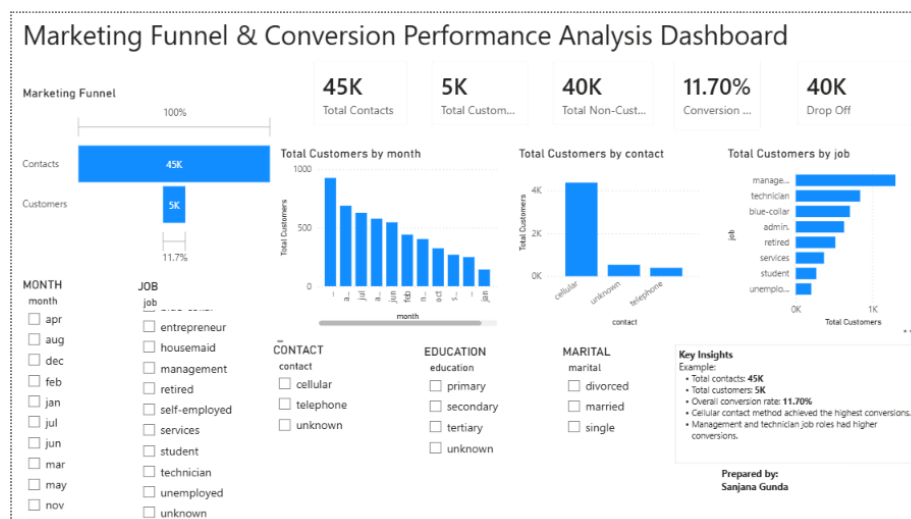

- Job
- Marital Status
- Education
- Contact Method
- Month
- Campaign Outcome (y)

3. KPIs Created

The following KPIs were created in Power BI:

- Total Contacts
- Total Customers
- Total Non-Customers
- Conversion Rate
- Drop-off Rate

4. Dashboard Visualizations

5. Key Insights

- Total Contacts: **45K**
- Total Customers: **5K**
- Overall Conversion Rate: **11.70%**
- Cellular contact method resulted in the highest customer conversions.
- Management and technician job categories had comparatively higher customer conversions.
- A significant number of contacted customers did not subscribe, indicating opportunities to improve campaign effectiveness.

6. Recommendations

- Focus marketing efforts on the cellular contact method.
- Target high-performing customer segments.
- Improve campaign strategies during lower-performing months.
- Optimize marketing campaigns using customer demographic insights.
- Continuously monitor conversion KPIs for better decision-making.

7. Conclusion

This project demonstrates how Power BI can be used to analyze marketing funnel performance and visualize key business metrics. The dashboard provides actionable insights that can support data-driven marketing decisions and improve customer conversion rates.
